p−curve test for left skew (Stouffer)
Brodeur et al. (2020), all four methods pooled, kappa <= 0.5: 19,811 t−statistics in 675 articles; 40 repetitions; shaded: 95% band around 5%.
Effects ~ Gamma(shape 1.413, rate 0.770), i.e. scale 1.298 and mean 1.83, Kudrin's, with 1.2980 a scale; within−article rho = 0.80 (in the effects).
Maximum of 8 specifications
Threshold: second draw if t <= 1.96
