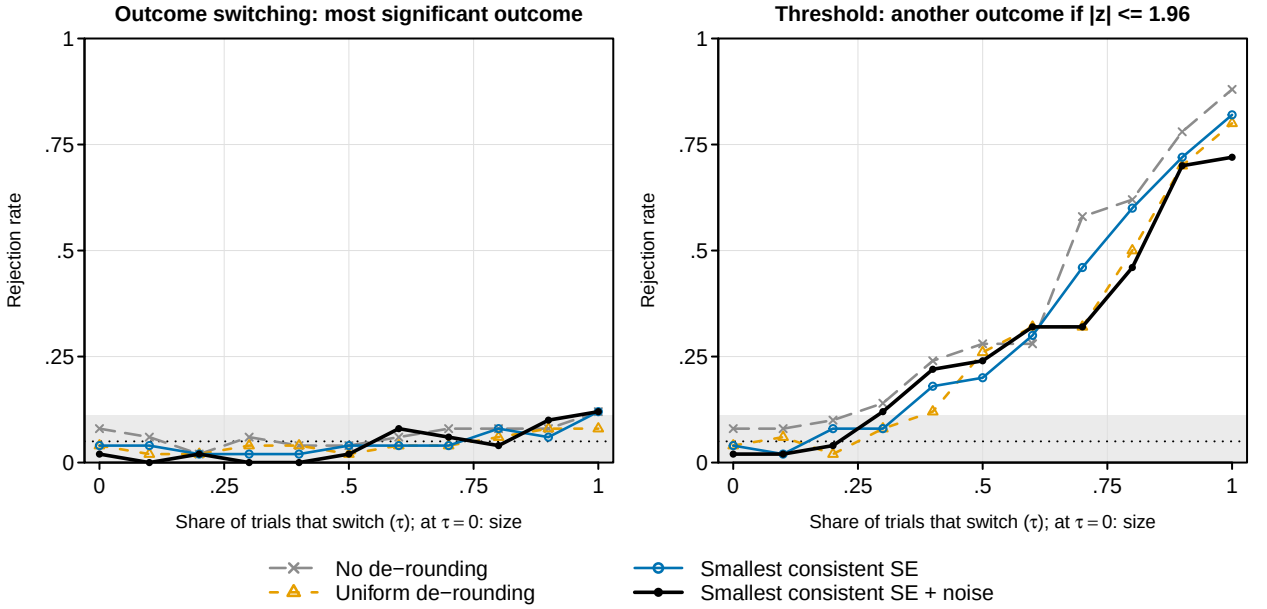
Kudrin's T_H hybrid

Cochrane: continuous efficacy outcomes of randomized trials (n >= 100); meta−samples of 1,500 of 3,282 trials with >= 2 outcomes; 50 repetitions; shaded: 95% band around 5%.


A share tau of trials reports its most significant outcome (max) or switches when |z| <= 1.96 (threshold); the rest report a random one.
